**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 55-78 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims fail to provide a written support for the step of "maintaining the level of dithionate ion generated in the leach solution at less than about 5 g/l by maintaining an excess of manganese dioxide in the leach solution and maintaining the oxidation reduction potential of the leach solution at a level of at least about 55 mV (vs Ag/AgCl reference electrode)."

The specification in the portions pointed out to provide support state instead, that "ferrous concentration is preferably maintained at a level below about 0.5 g/l by providing an excess or residual amount of manganese dioxide in the slurry. The ratio of

ferric to ferrous may be monitored through the leach to ensure an oxidation reduction potential (ORP) of 550 mV, or about (vs Ag/AgCl reference electrode)."

### ***Allowable Subject Matter***

Claims 61 and 72 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The limitations contained in the dependent claims would have to be added to the independent claim after the limitation to the step of "maintaining the level of dithionate ion generated in the leach solution at less than about 5g/l".

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose the step of maintaining an excess of manganese dioxide and maintaining the ORP about 550 mV (vs Ag/AgCl reference electrode).

### ***Response to Arguments***

Applicant's arguments with respect to claims 55-78 have been considered but are moot in view of the new ground(s) of rejection.
